Easy Text Effects Overview

You can add custom styles using one or more of the following effects:

Bevel

Add various combinations of highlights and shadows to a layer.

Stroke

Outlines the object on the current layer using color, a gradient, or a pattern. It is particularly useful on hard-edged shapes such as type.

Inner Shadow

Adds a shadow that falls just inside the edges of the layer's content, giving the layer a recessed appearance.

Color, Gradient, and Pattern Overlay

Fills the layer's content with a color, gradient, or pattern.

Style Options

All style options like Distance, Angel, Position, BlendMode work the same way as in the Photoshop. Easy Text hasn't all style options, that has Photoshop, but in the next updates we are planning to add all functionality.

Please visit any Adobe Help to understand how it works.

Outer Glow and Inner Glow

Add glows that emanate from the outside or inside edges of the layer's content.

Drop Shadow

Adds a shadow that falls behind the contents on the layer.

Drop Close Shadow

Works identically, as Drop Shadow, but only in symbol rectangle bounds, defined in Spacing.
